WAPARKING
ENGINEERED TO FIT, BUILT TO LAST

Parking, Engineered

Proudly Made In India

Smart parking for smart cities

Fully automated parking systems that store and retrieve your car the way the world's most advanced warehouses move their most valuable goods — safely, in seconds, in a fraction of the space.

From the Creintors Group
Creintors®
come...let's grow

Backed by **17+YEARS** *of Automated Storage & Retrieval Engineering*

Our Origin

We didn't start in parking. We started in automation.

For over 17 years, the Creintors engineering team has designed Automated Storage & Retrieval Systems (ASRS) for India's most demanding factories — vertical towers up to 25 metres, mother–baby shuttles, stacker cranes, and gravityflow racking, all run by our own control and warehouse-management software.

Storing and retrieving a car is the same engineering problem as storing and retrieving a pallet: lift it, shuttle it, track it, and return it — automatically, without a scratch. **WAPARKING is where that proven expertise meets the city.**

The Engineering Behind Us

17+ yrs
Automation Engineering

150+
Engineers & specialists

300+
Industrial Installations

25 m
Tallest Asrs Built

IMS certified
ISO 9001·14001
45001·27001

CII & National innovation awards, 2014-2021

One-point contact:
Design · Manufacture
Install · Maintain

2012 Creintors Group founded

Engineering-led storage & automation business; ISOcertified, award-winning, 300+ industrial installations.

17 years of ASRS in the field

Shuttles, lifts, cranes and WMS software deployed for L&T, JSW, Bharat Forge, Dr. Reddy's, TVS, Titan and more.

The same machine, a new load

An automated parking tower is an ASRS where the stored unit is a vehicle — identical lift, shuttle and control disciplines.

WAPARKING

That capability, productised for urban mobility and built in India.

Why our pedigree matters to your project

Every parking feature traces back to proven warehouse engineering.

Our parking systems aren't a leap of faith. Each capability is a discipline our team has already shipped at industrial scale — now applied to vehicles.

17 years of asrs	WAPARKING delivers
Vertical lifts & storage towers up to 25 m	Tower & Circular parking — 108 cars in 2400 sq ft
Mother–baby & radio shuttle systems	Puzzle & Rotary dense parking that randomises retrieval
Lead-screw & hydraulic lift mechanisms	Stack & Scissor systems — vehicle held safely at four wheels
In-house WMS, control software, RFID & barcode	Card / SMS / app retrieval & full parking management software
Structural-steel design & in-house manufacturing	Entire steel structure — civil work only for the foundation
Pan-India installation, AMC & one-point contact	24×7 support, relocation, refurbishment & spares

The disciplines on the left are not aspirations — they are field-proven across 300+ industrial installations. Parking is simply our most precise load yet.

The Product Line

One engineering team. Every parking format.

From a two-car home stacker to a fully automated circular tower, every WAParking system is designed, manufactured and serviced under one roof.

Circular Parking

✓Premium ✓Least space
✓Full automation

108 cars in 2400 sq ft. Fully automated retrieval, adaptable façade that can match the building beside it.

Tower Parking

✓Vertical ✓Fully automated

A vertical tower that stores and retrieves cars in a small footprint and slashes the time spent hunting for a spot.

Stack Parking

✓ Cost-effective
✓ Space-limited sites

Multiple cars in a small area — ideal where space is tight, customisable to different vehicle types.

Puzzle Parking

✓ Independent operation

Park 5–8 cars in the space of 3. Fully automated, quick retrieval, less congestion.

Rotary Parking

✓ High traffic
✓ Limited space

Many cars in a compact area with easy access and fast automated retrieval.

Scissor Parking

✓ Compact ✓Automatic

Park 2–3 cars in the space of one, safely and automatically.

Software & Operations

Material flow, meet information flow.

The same philosophy that runs our warehouses runs our parking: every movement is tracked, every car is accounted for. Our parking-management platform is built on years of WMS and Industry-4.0 integration.

Parking Management Software

- Remote site monitoring & multi-site network management
- Interface to revenue-control & access-control systems
- Automated ticketing & ALPR licence-plate recognition
- Mobile / web retrieval – swipe, SMS or app
- Reporting on occupancy, car history & peak times

Built-in Safety & Sustainability

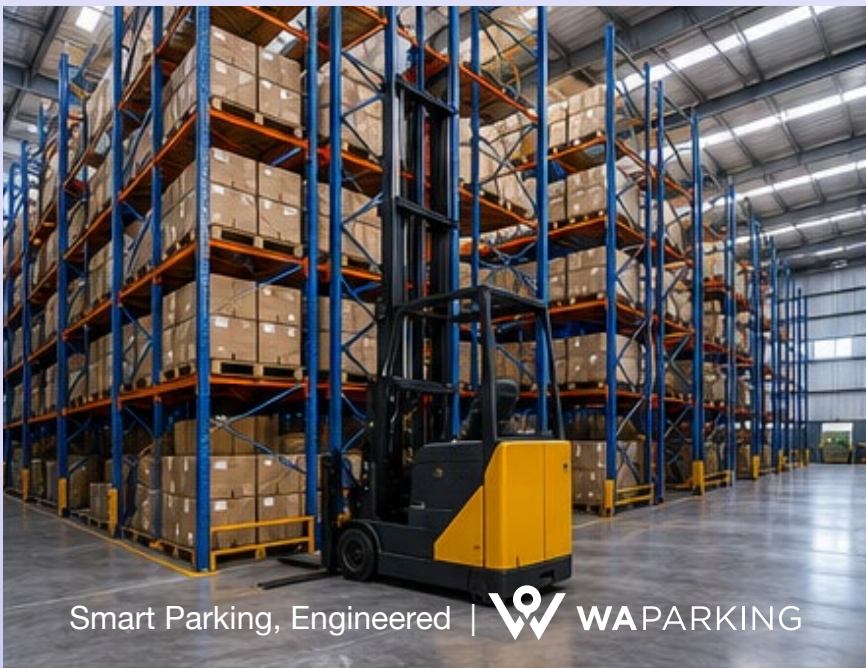

- Vehicle secured at four wheels – collision risk eliminated
- Theft prevention for vehicle & belongings; pedestrians stay clear
- Fuel-leak / hazard detection
- Lower power draw, reduced carbon footprint, optional car wash
- Manual & automated dual-mode operation

24×7×365
On-call hotline & permanent availability across India.

One-point contact
Mechanical, electrical, controls & software-one accountable team.

Lifecycle care
Assembly, installation, AMC, relocation & refurbishment.

The Track Record Behind The Brand

New to parking. Not new to your standards.

WAParking is young — but the engineering team behind it has spent 17 years earning the trust of India's most demanding manufacturers. The same hands build your parking.

Industries that already trust our engineering

JSW Better Everyday · Larsen & Toubro · Kalyani Bharat Forge · Sundram Fasteners Limited

UNO Minda · Dr. Reddy's · Titan · Menon

Endress+Hauser People for Process Automation · UPL · Duroflex

+ Many more

2014 — Outstanding Exporter Award

2015 — National Productivity & Innovation

2016 — CII Best Manufacturing Start-up

2018 — CII Process Innovation

2019 — CII Product Innovation

2021 — National Start-up Award shortlist

In-house everything

Design, structural-steel manufacturing, controls, software and installation – no outsourced black boxes.

Made in India

Engineered, fabricated and supported locally — faster lead times, faster service, lower lifetime cost.

WAPARKING®

ENGINEERED TO FIT, BUILT TO LAST

Let's Build it

Your imagination. Our engineering.
